Bring production information into focus.

Give teams a clear visual overview of the information that matters across the production environment.

Visible priorities

Organize approved production dashboards, quality views and meeting content around the work of the team.

Useful briefings

Plan layouts for a shift meeting, a line review or a focused investigation, with a consistent way to choose the right sources.

Right display, right place

Match display technology and installation to the viewing distance, lighting and physical location.

Design the workflow before selecting the hardware

Different areas of a manufacturing site have different visual needs. A briefing room may need presentation switching, while a central operations space may need several views at once. Define these environments separately and coordinate the AV design with the teams responsible for production applications and site infrastructure.

What to include in your project brief

• Content readability at the intended distance

• Source connections and update workflows

• Physical mounting, cabling and service access

• Who changes layouts and maintains the content

Explore the operator experience

See the 4thewall desktop management approach in the product demonstration below. The video introduces a software workflow; it is not a reference installation for this industry.

Questions to resolve early

Start with the source interfaces, simultaneous views, display arrangement and operator workflow. The related product families below are starting points for evaluation. Confirm the final model, software version and integration scope against the project requirements.

Document likely changes in sources, displays and operator positions in the initial brief. Expansion options depend on the selected hardware, software licensing and network design; they must be confirmed for the proposed configuration.
